### FUTURE ENERGY PROJECTS & TESLA VS. EDISON

Today we have a fascination for past inventors and what projects they pioneered that changed and modernized our world today into 21<sup>st</sup> Century. Seeking alternative ways to power our world, we review the prominent power supply creators of the 19<sup>th</sup> and 20<sup>th</sup> Century. The visionaries of the modern world often point to the project undertakings of two legendary geniuses - Thomas Edison and Nikola Tesla. Whose application do we practice today in our 21<sup>st</sup> Century's lifestyle? This is where Thomas Edison has a stronger connection to modern day living as we know it today. Edison's projects were done for practical benefit. His vision was to bring safe electricity to the home using his home inventions. There is more safety in using DC power even though it can't go the distance. Unlike Tesla, Edison did not think of transmitting power over long distances. Edison's mind was off the big power grid. He believed in local generating stations embedded in neighborhoods that served electricity to each home. He even proved that a home could have its own standalone generating station. He purchased a standard size family home in 1905 in West Orange, New Jersey not far from his lab. He made this house into a demo model home of electrification. The house had its own electric generating station. It is here that Thomas Edison tested out the practicality of his various new Edison household appliances, inventions, and devices for his vision of the modern day family home. When we flip the light switch to light our home, this is a Tesla concept of powerful long distance AC power. When we recharge our battery powered personal electronic devices we are using DC power. So, we can say much of our power needs today give relevance to Edison's power supply beliefs.
